New evaluations, distributional maps, including addenda and corrigenda to "Hymenoptera of Turkey" –I

Ahmet Ömer Koçak Muhabbet Kemal

Abstract: New evaluations, distributional maps, including addenda and corrigenda to "Hymenoptera of Turkey" – I. *Priamus* (Suppl.) 39: 1-88 +[90], 90 maps, 2 Tables. In this paper, the list of the 930 *Ichneumonidae* species of Turkey, and the list of the 5858 Hymenoptera species of Turkey are given. Totally 90 global maps of the *Ichneumonidae* species are presented. Faunal numbers in the Pterygota of Turkey are updated. According to this total number of species reach to 25289. Evaluations of the rates of success of 62 hymenopterists are discussed.

Key words: *Hymenoptera*, *Ichneumonidae*, success of taxonomist, fauna, Turkey.

"Hymenoptera of Turkey" as the first comprehensive faunal list has been published within the enormous private project Pterygota of Turkey (Koçak & Kemal,2015). This is of course an extraordinary task for the authors¹; therefore, some minor technical arrangement of the database files, spelling problems, or incomplete literary evaluating are inevitable. A great number of faunistical and taxonomical information have been added or corrected by the authors in the database programs. The present information used in the paper is filtered from the relevant database programs.

In the present paper, especially three selected topics are emphasized: (1) Updating numerical values, updating and expanding numerical evaluations on rate of success of the hymenopterists; (2) Expanded annotated list of the Ichneumonidae of Turkey, together with newly prepared global maps of 90 Ichneumonid species, (3) Updated species list of the Hymenoptera of Turkey.

¹ The authors defend always the importance and necessity of free will, and mind's ability at all scientific subjects to be studied.

Within the project on the Pterygota fauna of Turkey, the total number of the species in Turkey reaches to 25289. The number of all the taxa of the family-, genus-, and the species-groups is now 36616 **(Table 1).** Among them, the species of the Hymenoptera of Turkey is 5858. This is listed at the end of the paper.

Previous numerical evaluations are given in grey (cf. Koçak & Kemal,2015).

Tentative numerical evaluations of 62 hymenopterists, based upon **16230** taxa are given above **(Table 2 & the graph).** According to these, rate of success of 26 authors (42%) are accepted here as unsuccessful, while the rate of success of the 18 authors(29%) are considered as successful. The rates of success of the rest of the authors (29%) were between 74-50%; therefore their successes are acceptable as enough. The average rate of success of the 62 hymenopterists is 54.04%; therefore this is admissible as an enough success.

It was not hitherto observed such an evaluation on success of the taxonomists in the literature.

Expanded annotated list of the 930 Ichneumonidae species of Turkey

Distributional codes have been used for preparing maps. The maps prepared are listed below. The maps are added at the end of this publication.

Priamus Supplement is the first international, online publication of the Centre for Entomological Studies Ankara (CESA), established in 2006 in accordance with the Publications Rules of the ICZN. It appears at irregular intervals online, as PDF format, archived in the "Internet Archive" regularly.

It includes larger original articles and theses of the research workers of the Centre, regarding morphology, bibliography, check-list, catalogue of Insects, especially Lepidoptera, as well as papers on faunistic, ecological and distributional researches. The publication languages are Turkish, English, German and Uighurian.
